Demonstrating 21st Century Methods and Critical Tools for Risk-Based Decisions

Global stakeholders have greatly accelerated development of advanced methods for assessing chemical toxicity and exposure. These methods are now poised to meet the increased demand for risk-based evaluations to support regulatory decisions and product-stewardship. This workshop will showcase examples of how these advancements and tools can support risk-based screening and assessment of chemical products.

The International Council of Chemical Associations' Long-Range Research Initiative (ICCA-LRI) invites you to attend this year's workshop. The annual ICCA-LRI workshops bring together international representatives from industry, academia, and governmental and non-governmental organizations to address issues of mutual interest in chemical safety. The workshop agenda will include plenary speakers, panel discussions, and a poster session highlighting relevant research.

Registration will be opening soon! For more information, please contact the ICCA-LRI Workshop Coordinator at LRI_Workshops@icf.com

An optional training session on the Population Life-Course Exposure to Health Effects Model (PLETHEM) will be held at the conclusion of the workshop.

The workshop will feature a variety of themes, including:

- ▶ Case Examples of Applying 21st Century Methods in Decision Making in:
 - Human health
 - Ecotoxicology
- ▶ Critical Tools for Risk-based Decision Making, such as:
 - Toxicogenomics
 - In vitro to in vivo extrapolation
 - Persistence/Bioaccumulation

Ottawa, Canada – Canada's capital is home to a wealth of culture and history poised on the edge of breathtaking countryside. Witness the Changing of the Guard ceremony on Parliament Hill, stroll through historic ByWard Market to sample wares of local artisans and farmers, or admire the Rideau Canal as it winds its way downtown. We hope you enjoy discovering this charming destination!
