

ICCA-LRI & HEALTH CANADA WORKSHOP

ADVANCING EXPOSURE SCIENCE TO IMPROVE CHEMICAL SAFETY

Evaluating risks from chemicals in everyday life requires information about both exposure and hazard. Improvement in chemical safety will require that exposure science match pace with ongoing developments in toxicity testing for chemicals.

The International Council of Chemical Associations' Long-Range Research Initiative (ICCA-LRI) and Health Canada are organizing a workshop on improving chemical safety evaluations through innovative use of exposure science and biological and computational technologies.

This workshop will focus on increased understanding of:

- Low level chemical exposures
- Relevant windows of exposure, including perinatal periods
- Chemical mixtures, mixed exposures, and cumulative effects.

A discussion session on translating science for decision-making will be included in the workshop agenda.
